

Helicopter Used Serviceable Material

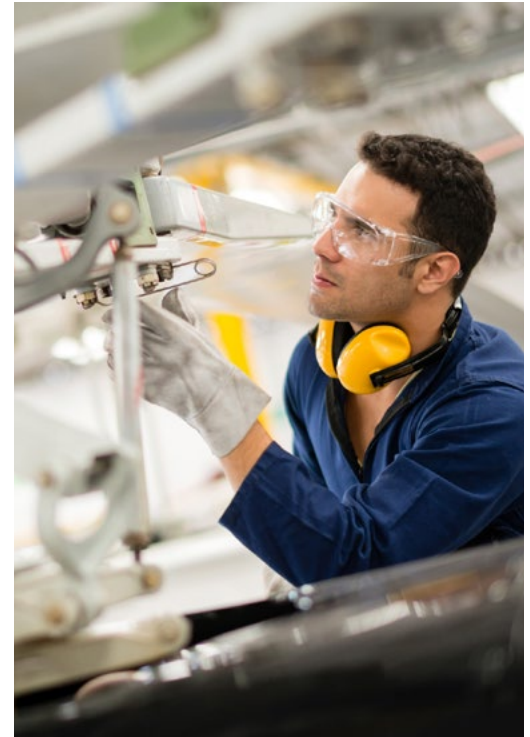

Delivering economical solutions for maintenance events

Boeing's Used Serviceable Material (USM) program supports your operation by providing economic solutions for components and enabling extended fleet effectiveness through diverse product offerings. USM components are recovered from aircraft that have been taken out of commission. Our MRO supplier base then inspects and certifies or repairs the components based on condition and brings them up to airworthiness requirements.

This program provides solutions to operators who require support for their major components, including: Engines, dynamic components, hydraulics, avionics and airframe structures through outright sale and exchange.

Boeing's Helicopter USM Program primarily supports the following platforms for customers worldwide.

- **Bell:** 204, 205, 206, 206L, 212, 407 and 412
- **Airbus:** AS350B2
- **Rolls-Royce:** M250 and RR300
- **Safran:** Arriel 1D1

Benefits

- Economical solutions for acquiring components during a maintenance event
- Flexible purchasing options to best fit your operational needs: Outright sales and exchanges
- Extend lifecycle value and fleet effectiveness

Features

- Diverse product offerings and strategically located global inventory
- Available USM conditions: As removed, inspected, tested, repaired and/or overhauled
- Approved supplier base of over 500 MRO suppliers
- Inventory supports Bell and Airbus helicopters as well as Rolls-Royce and Arriel 1D1 engines
